

Java

```
class Solution {  
    public boolean isPrefixString(String s, String[] words) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @param {string[]} words  
 * @return {boolean}  
 */  
var isPrefixString = function(s, words) {  
  
};
```

TypeScript

```
function isPrefixString(s: string, words: string[]): boolean {  
  
};
```

C++

```
class Solution {
```

```
public:
    bool isPrefixString(string s, vector<string>& words) {

    }
};
```

C#

```
public class Solution {
    public bool IsPrefixString(string s, string[] words) {

    }
}
```

Kotlin

```
class Solution {
    fun isPrefixString(s: String, words: Array<String>): Boolean {

    }
}
```

Go

```
func isPrefixString(s string, words []string) bool {

}
```
